Del 1: Hvordan går man **praktisk** til søgninger ?

Søgestrategi, søgeprocesser og overvejelser

DTU Findit er hvor al søgning ‘starter & slutter’ 😊

The screenshot shows the DTU Findit homepage. At the top right, there are links for 'About', 'Log in', and the DTU logo. The main heading 'DTU Findit' is prominently displayed, followed by the tagline 'Millions of articles, conference papers, theses, books and more'. Below this, a section for 'Other search tools' lists 'Web of Science', 'Scopus', 'Scite AI', 'Cabells', and a link to 'more tools'. A large search input field with a magnifying glass icon is centered. Below the input field are three options: 'Flexible matching', 'Search syntax' (with a question mark icon), and 'Advanced'. At the bottom, it states 'A SERVICE FROM DTU Library - the gateway to knowledge and innovation'. On the right side, a 'Log in?' dropdown menu is open, showing three options: 'Log in as DTU user' (highlighted in red), 'Log in as non-DTU user', and 'No thanks'. The text in the dropdown explains that DTU users get better search results, including licensed content and discounts on order fees, and that anyone can log in to get personalized features like favorites, tags, and feeds.

Læringmål..

Efter oplægget kan du...

- **søge smartere** med stærke strategier (og med AI som makker)
- udnytte **DTU Findit** som en super bruger
- finde rundt i **DTU Biblioteks** vigtigste værktøjer
- **vælge de rette** søgesystemer til både information og data
- anvende resultater ud fra anbefalede, **akademiske kriterier**
- Forklare, hvorfor det **at citere korrekt og bruge indhold** lovligt er vigtig viden

***GenAI værktøjer har

Tips til søgning og ‘brug af information’

Information overload er bare et faktum

Illustration fra Microsoft PowerPoint.
Brugt under Microsoft Corporation T&S.

Forskere og studerende synes ofte, det er udfordrende at følge med i den enorme mængde publiceret litteratur.

Mange har også svært ved at komme videre end værktøjer som **Google Scholar** og tilegne sig de grundlæggende kompetencer, der skal til for at gennemføre et grundigt litteratur studie/review.

De fleste forskere og studerende har brug for at vide:

- ✓ Hvordan finder jeg de vigtigste artikler?
- ✓ Hvem er de førende forskere inden for mit forskningsfelt?
- ✓ Hvad er de centrale emner og diskussioner lige nu?
- ✓ Hvor er der mulige huller i litteraturen de har overset
 - og hvilke trends er måske på vej?

Definitionen på en scientific article

definition of a scientific article

AI Overview

A scientific article is a peer-reviewed, formal, and specialized document published in an academic journal that communicates the results of original research, reviews existing literature, or reports new findings in a specific field. It serves as a primary source for researchers, featuring a standardized structure (usually IMRaD) to allow for replication, validation, and advancement of scientific knowledge.

Key characteristics and components of a scientific article include:

- **Peer Review:** Evaluated by experts in the field for quality, accuracy, and relevance before publication.
- **Originality:** Reports previously unpublished research or significant advancements in knowledge.
- **Structure (IMRaD):** Typically follows the structure of Introduction (background/question), Methods (design/technical details), Results (data presentation), and Discussion (interpretation/conclusions).
- **References:** Contains in-text citations and a bibliography of previous work, ensuring credibility.
- **Audience:** Targeted at other researchers, scientists, and academics rather than the general public.

research highlights

ImageNet Classification with Deep Convolutional Neural Networks

By Alex Krizhevsky, Ilya Sutskever, and Geoffrey E. Hinton

Abstract

We trained a large, deep convolutional neural network to classify the 1.2 million high-resolution images in the ImageNet ILSVRC-2010 contest into the 1000 different classes. On the test data, we achieved top-1 and top-5 error rates of 37.5% and 17.0%, respectively, which is considerably better than the previous state-of-the-art. The neural network consists of five convolutional layers, some of which are followed by max-over-time pooling layers, and three fully connected layers with a final 1000-way softmax. To make training faster, we used non-saturating neurons and a very efficient GPU implementation of the convolution operation. To reduce overfitting in the convolution layers we employed a recently developed regularization method called "dropout" that proved to be very effective. We also entered a variant of this model in the ILSVRC-2012 competition and achieved a winning top-5 test error rate of 15.3%, compared to 26.2% achieved by the second-best entry.

1. PROLOGUE

Four years ago, a paper by Yann LeCun and his collaborators was rejected by the leading computer vision conference on the grounds that it used neural networks and therefore provided no insight into how to design a vision system. At the time, most computer vision researchers believed that a vision system needed to be carefully hand-designed using a detailed understanding of the nature of the task. They assumed that the task of classifying objects in natural images would never be solved by simply presenting examples of images and the names of the objects they contained to a neural network that acquired all of its knowledge from this training data.

What many in the vision research community failed to appreciate was that methods that require careful hand-engineering by a programmer who understands the domain do not scale as well as methods that replace the programmer with a powerful general-purpose learning procedure. With enough computation and enough data, learning beats programming for complicated tasks that require the integration of many different, noisy cues.

Four years ago, while we were at the University of Toronto, the error rate for recognizing objects in natural images and triggered an overdue paradigm shift in computer vision. Figure 4 shows some examples of what SuperVision can do. SuperVision evolved from the multilayer neural networks

that were widely investigated in the 1980s. These networks used multiple layers of feature detectors that were all learned from the training data. Neuroscientists and psychologists had hypothesized that a hierarchy of such feature detectors would provide a robust way to recognize objects but they had no idea how such a hierarchy could be learned. There was great excitement in the 1980s because several different research groups discovered that multiple layers of feature detectors could be trained efficiently using a relatively straight-forward algorithm called backpropagation^{14, 22, 23} to compute, for each image, how the classification performance of the whole network depended on the value of the weight on each connection.

Backpropagation worked well for a variety of tasks, but in the 1980s it did not live up to the very high expectations of its advocates. In particular, it proved to be very difficult to learn networks with many layers and these were precisely the networks that should have given the most impressive results. Many researchers concluded, incorrectly, that learning a deep neural network from random initial weights was just too difficult. Twenty years later, we know what went wrong: for deep neural networks to shine, they needed far more labeled data and hugely more computation.

2. INTRODUCTION

Current approaches to object recognition make essential use of machine learning methods. To improve their performance, we can collect larger datasets, learn more powerful models, and use better techniques for preventing overfitting. Until recently, datasets of labeled images were relatively small—on the order of tens of thousands of images (e.g., NORB,¹⁰ Caltech-101/256,^{4, 18} and CIFAR-10/100¹⁹). Simple recognition tasks can be solved quite well with datasets of this size, especially if they are augmented with data-preserving transformations. For example, the current-best error rate on the MNIST digit-recognition task (<0.3%) approaches human performance.⁶ But objects in realistic settings exhibit considerable variability, so to learn to recognize them it is necessary to use much larger training sets. And indeed, the shortcomings of small image datasets have been widely recognized (e.g., Ref.²⁰), but it has only recently become possible to collect labeled datasets with millions of

The original version of this paper was published in the Proceedings of the 25th International Conference on Neural Information Processing Systems (Lake Tahoe, NV, Dec. 2012), 1097–1105.

- **Keyword search** focuses on matching **exact words or phrases** from the query with the context in the information system. **It's literal** and doesn't account for meaning or context.
- **Semantic search** aims to **understand the intent** behind the query. It considers **synonyms, related concepts, and contextual information** to deliver more relevant and accurate results.

AI er allevegne – også i en ‘normal Google søgning’

Google search results for the query: "present me with documentation for how and why generative ai tools can be useful as a supplement to the".

enterprise leaders use agentic AI to drive growth, scale, & value. Get the Report! Enterprise Grade AI.

AI Overview

Generative AI is useful as a supplement to traditional search for literature research because **it can increase efficiency, provide new ways to understand complex topics, and help brainstorm research questions and search terms**. Key functions include summarizing articles, identifying themes and connections between papers, and helping to refine search queries for academic databases. It's crucial to remember that AI should supplement, not replace, traditional searches, and all AI-generated information should be verified against original sources due to limitations like potential inaccuracies and hallucinations.

How generative AI can be used

- **Brainstorming:** Use AI as a partner to brainstorm research questions, potential search terms, and different angles on a topic.
- **Summarizing:** Get quick summaries of articles to decide which ones are most relevant, saving time on initial screening.
- **Identifying connections:** AI can help visualize the relationships between authors, papers, and different fields of study to help identify key works and trends.
- **Improving search queries:** Refine search terms for specific academic databases by getting help with synonyms, related terms, and database-specific syntax, notes [Sage Journals](#).
- **Interpreting complex information:** Ask AI to explain complex concepts or provide overviews of a topic, making dense literature more accessible.

Why it is a useful supplement

- **Increased efficiency:** AI automates and speeds up time-consuming tasks like sifting through large numbers of articles and generating initial summaries.

Absolute sustainability: Challenges to life cycle engineering

Methodology
Absolute sustainability

ABSTRACT

The global society faces huge challenges to meet the expanding needs of a growing population within the constraints posed by a climate crisis and a strongly accelerated loss of biodiversity. For sustainability, the total environmental impact of our activities must respect the planetary boundaries that define what is a safe operating space for our civilization. Engineering must change the current focus on eco-efficiency to a search for solutions that are effective in terms of operating within the share of the total pollution space that they can claim. Engineering for environmental sustainability must be life cycle engineering, and the paper positions it relative to the constraints given by the boundaries of the ecosystems, the targets of the United Nations' sustainable development goals and the strategies for a circular economy. This top down perspective is combined with a bottom-up perspective from the life cycle of the product and technology. For each stage of the life cycle, the contents of the toolbox for life cycle engineering are reviewed, and a perspective is given on how absolute environmental sustainability requirements can be incorporated in a target-driven life cycle engineering.

© 2020 The Authors. Published by Elsevier Ltd on behalf of CIRP. This is an open access article under the CC BY-NC-ND license (<http://creativecommons.org/licenses/by-nc-nd/4.0/>).

1. Introduction

Before embarking on the analysis of the challenges mentioned in the title of the paper, there are two questions that the title elicits: What is absolute sustainability, and what is life cycle engineering?

1.1. Definitions of sustainability and sustainable development

The United Nations' Commission on Environment and Development in 1987 presented the definition of a sustainable development as a 'development that meets the needs of the present without compromising the ability of future generations to meet their own needs' [229]. With its focus on fulfillment of human needs now and in the future, the definition has been widely adopted, but the devil is in the details and the definition gives no specification of which type of needs are concerned. Later, Elkington operationalized the sustainability concept in a business context with his suggestion of the three dimensions of sustainability – social, environmental and economic – reflected in three bottom lines (people, planet, profit) that a company must ensure to balance in order to be sustainable [46]. In 2015 the member states of the United Nations adopted the 2030 Agenda for Sustainable Development, further specifying the three sustainability dimensions into 17 Sustainable Development Goals (SDGs) with a total of 169 underlying targets to be achieved before 2030 [215].

1.2. An absolute perspective on sustainability

Already in 1798, the English professor and priest Thomas Malthus observed that with its exponential growth, the human population was bound over time to exceed the ability of the planet to feed it [147]. This carrying capacity was subsequently demonstrated to be strongly dependent on technology development and not least the access to abundant fossil resources. Around 1970, a group of researchers developed the first computer models of the developments in global human population, food production, industrialization, pollution and consumption of non-renewable natural resources and analysed future scenarios to investigate whether changes in the growth patterns for these five parameters might allow emergence of a sustainable feedback pattern for the human civilization. They found that one out of three analysed scenarios lead to a 'stabilized world' while the other two scenarios lead to 'overshoot and collapse' and reported their results to the Club of Rome and to the world in the report 'Limits to growth' [151]. The absolute boundaries posed by Earth's finite natural resources and the limited capacity of the environment to absorb pollution were challenged at the time, but lately the existence of absolute boundaries for man-made pollution of the atmosphere with greenhouse gases like CO₂ and CH₄ have gained not just scientific, but also broad political acceptance. This was demonstrated by the adoption of the Paris agreement targets to keep our climate change impacts at a level where global atmospheric temperature increase remains close to 1.5° above pre-industrial levels.

Taking a broader perspective on climate stability, Rockström, Steffen and colleagues identified nine planetary environmental processes

A comprehensive review on indoor air quality monitoring systems for enhanced public health

Jagriti Saini^{1*}, Maitreyee Dutta¹ and Gonçalo Marques²

Abstract

Indoor air pollution (IAP) is a relevant area of concern for most developing countries as it has a direct impact on mortality and morbidity. Around 3 billion people throughout the world use coal and biomass (crop residues, wood, dung, and charcoal) as the primary source of domestic energy. Moreover, humans spend 80–90% of their routine time indoors, so indoor air quality (IAQ) leaves a direct impact on overall health and work efficiency. In this paper, the authors described the relationship between IAP exposure and associated risks. The main idea is to discuss the use of wireless technologies for the development of cyber-physical systems for real-time monitoring. Furthermore, it provides a critical review of microcontrollers used for system designing and challenges in the development of real-time monitoring systems. This paper also presents some new ideas and scopes in the field of IAQ monitoring for the researchers.

Keywords: Developing countries, Environmental health, Indoor air quality monitoring, Indoor air pollution, Public health, Occupational health

Introduction

With the ongoing improvement in the quality of life, breathing environment has become a vital area of concern for researchers in the field of indoor air quality. Many studies confirm that indoor air pollution is a significant health risk [1]. Nowadays, 90% of the population in developing countries make use of unimproved and poorly functioning cooking methods of cooking are responsible for indoor air pollution (IAP) and poor health of young children who are often exposed to the polluted environment [2]. Biomass is a major source of a range of harmful pollutants including particulate matter (PM), Nitrogen Dioxide (NO₂), Sulphur Oxides, polycyclic aromatic hydrocarbons (PAHs), and carbon monoxide [3, 4]. Constant use of solid fuels is the major cause of several harmful diseases in developing countries. Chronic obstructive pulmonary disease (COPD), otitis media, acute respiratory infections, tuberculosis, asthma, lung cancer, chronic bronchitis, and nasopharynx, low birth rate, perinatal loss, and severe eye diseases that can even cause blindness are some of the health risks associated with IAP. In developing countries, the impact of modernization has led to a significant shift in indoor fire and heating from biomass fuels such as petroleum products to electricity-based appliances. As per World Energy Outlook 2017 [7], even after several improvements in cooking measures, 1.3 billion people in developing Asia are still expected to rely on biomass for cooking by the year 2030. According to current estimates, 2.8 million premature deaths are estimated every year due to the use of coal and biomass for cooking [7]. The scenario becomes more alarming when kerosene, candles and other harmful fuels are used for cooking [7]. Generally, the types of fuels being used for cooking in developing countries are not clean and efficient. People start moving towards cleaner and efficient

Explorativ søgning

(citationssøgning, kædesøgning, 'pearl growing', [snow-balling](#) 😊)

Start med et godt udgangspunkt - en 'seed article'

→ Det kan være én virkelig god artikel eller flere relevante papers inden for dit emne

→ Brug denne seed-artikel aktivt
Udtræk nye søgeord, begreber og viden, og tjek både referencerne og artikler, der citerer den (klassiske hand-searching)

→ Brug de fundne termer til nye søgninger
De identificerede synonymer og nøgleord kan sættes i spil i næste runde - fx via boolske operatorer som OR og AND

→ Og så gentager processen sig ...
Du finder nye ord > nye artikler > nye spor.
Hver runde fører dig til mere relevante termer, relaterede papers og nye resultater. Processen kan fortsætte ad flere omgange

Eks. Kan Scite.ai gå mere i dybden med 'indsigt'...

<https://scite-ai.proxy.findit.cvt.dk/home>

The screenshot displays the Scite.ai web interface. At the top, there's a navigation bar with 'scite_' logo, 'Assistant', 'Search', and 'More' with a dropdown arrow. On the right, there are icons for a notification bell and a user profile. The main content area shows a citation for 'Indoor Air' from 2011 with DOI 10.1111/j.1600-0668.2011.00747.x. It includes links for 'Get access via publisher', 'Cite', and 'Set alert'. The title of the article is 'Thermal comfort and gender: a literature review' by Sami Karjalainen¹. The abstract discusses the need for indoor thermal environments for females. Below the abstract, there's a link 'Help me understand this report'. On the right side, a 'scite_' sidebar shows a list of actions: 475 citations, 19 checks, 196 quotes, and 1 question mark. At the bottom, there are two main sections: 'Search citation statements' with a search bar and 'Order By: Relevance' dropdown, and 'Cited by 475 publications' (210 citation statements) and 'References 60 publications' (49 reference statements). A snippet of text from the article is visible at the bottom.

Thermal comfort and gender: a literature review

Sami Karjalainen¹

Abstract: We should no longer neglect the more rigorous requirements that females have for indoor thermal environments. Gender differences indicate that females have, on average, a greater need for individual temperature control and adaptive actions than males. The results of this review suggest that females should primarily be used as subjects when examining indoor thermal comfort requirements, as if females are satisfied it is highly probable that males are also satisfied.

Information Research - Vol. 30 No. CoLIS (2025)

Theorising notions of searching, (re)sources and evaluation in the light of generative AI

Olof Sundin

DOI: <https://doi.org/10.47989/ir30CoLIS52258>

Abstract

Introduction. The introduction of publicly available large language models (LLMs) since 2022 has significantly challenged traditional library and information studies (LIS) core concepts. This paper argues that LIS needs to rethink aspects of its conceptual framework to address the challenges posed by the proliferation of AI-generated content and how this content is produced.

Analysis. The study employs a theoretical analysis to critically examine the LIS concepts of search, sources and evaluation in the light of an increasingly AI-infused information infrastructure.

Results. The main argument of the paper is that due to changes in the information infrastructure, sources are becoming increasingly invisible for people when they look for information. This has profound implications for how searching for and evaluation of information can be conceptualised.

Conclusion. The paper is concluded by offering conceptual insights on how to theoretically navigate the rapidly evolving information landscape.

At finde ind til de reelle søgeord og synonymer..

1. Main topic: Humidity in buildings focusing on indoor air quality

2. Most important aspects: Indoor air quality (IAQ)
Indoor levels
Humidity
Conditions

3. Synonyms for each aspect: humidity
humidifier
moisture
moist

4. Creation of search string:

(humidity OR humidifier OR moisture OR moist)

Kend dine 'boolske operatorer' når du søger

AND

ALL terms must be present – narrows down your search

“indoor air” **AND** quality

OR

ANY of your terms must be present – broadens your search.

humidity **OR** moisture

NOT

NOT excludes terms – can make your search more precise
(but be careful!)

Humidity **NOT** climate

Og sæt dine 'blokke sammen' smartere...

(humidity OR humidifier OR moisture OR moist) AND ("indoor air quality" OR "indoor air" OR IAQ)

Søgeteknik – frasesøgning & nærhedsoperatorer

Phrase search is a search for a combination of words in a specific order by the use of quotation marks:

E.g. compounds: **"water filtration"**

E.g. *title*: **"Pool filtration medium enhances water quality"**

Proximity search is used to indicate that two words must be found within a certain distance of each other (e.g. **W/3**, **NEAR/3**, **~3**)

E.g. : **Indoor quality~2** = a maximum of 2 words between the keywords

E.g. **"Indoor environmental quality"** & **"Indoor air quality management"**

If you do not add quotation marks, many databases will automatically add a boolean AND between the words: i.e. wind AND energy instead of wind energy ...

Søgeteknik – trunkering & wild cards

Using a **truncation sign** (e.g. *, ?, #) you carry out an “open-ended search” – you search for all letters appearing after the root of the word.

E.g.: **child***=child, child**ren**, child**care**, child**hood**

Car*= car, cars**s**, car**ing**, car**etaker**, Car**michael** ○○○

AAAARGHH

Stemming is a simple type of truncation that captures all forms of the word (e.g. plurals, conjugations). Stemming typically makes it unnecessary to use truncation

E.g.: **Pollution**= pollution, pollute**e**, pollutes**s**, polluted**ed**, polluting**ing**

Using a **wild card** (e.g. *, ?, #) you replace a single letter inside a word - good for capturing spelling variations

E.g.: **Organi?ation**= (organiz**ation** AND organis**ation**)

Obs! Some databases truncate or stem automatically!

Truncation signs vary from database to database

Findit stems automatically in **Flexible matching**

Fordi søgning er en proces, så kan man ende med...

Indoor air quality (IAQ) in naturally-ventilated primary schools in the UK: Occupant-related factors

Korsavi, Sepideh Sadat ; Montazami, Azadeh ; Mumovic, Dejan

Building and Environment — 2020, Volume 180, pp. 106992

This study observed occupant-related factors of 805 children in 29 naturally-ventilated (NV) classrooms in UK primary schools during Non-Heating and Heating seasons. Occupant-related factors affecting IAQ include occupants' adaptive behaviours, occupancy patterns, occupants' CO2 generation rate and occupancy densities. Results of this study suggest that a classroom with high potentials for natural ventilation does not necessarily provide adequate IAQ, however, occupants' good practice of ...

Picture from [Free PNG Images](#) used according to the Copydan Visda agreement at DTU

Husk at udfordre de søgeord, som I har lavet tidligere – ved at ‘udspørge både Microsoft Copilot, ChatGPT eller en anden LLM om hjælp til at udforme en søgeprofil til jeres emne(r)

- overvej også hvordan I vil udforme en søgeprofil til senere brug (i evt. DTU Findit, Google Scholar eller Scopus..)

- HUSK at dokumentere / gemme jeres PROMPTs og evt. resultater

Hvad er jeres 'take på det'? (dialog)

- Fordele og ulemper ved at anvende henholdsvis Microsoft Co-pilot Chat & ChatGPT
- Gav det nye ideer til (nye/andre) keywords som kan anvendes i de 'akademiske databaser'?
- Hvis man anvender denne 'metode' til at opbygge søgninger, hvad skal man så være mest opmærksom på ?

Udviklingen går vældig hurtigt, og

AI supporterede søgeværktøjer og sprogmodeller kan **ikke erstatte de traditionelle** søgemetoder endnu, men AI værktøjerne har klart potentialet til at styrke metoden

AI supporterede søgeværktøjer **vil blive forbedrede og udvikles** og vil blive bedre til at 'forstå' hvad vi mener, i stedet for blot at nøjes med at søge på keywords. Det bliver en stor hjælp...

Men lige nu...

- Brug værktøjerne som supplement
- Husk at dokumenter søgning/proces
- Husk, vær kildekritisk, overvej 'bias' osv
- Og kvalitets vurder resultaterne

Bio-break

Del 2 Ophavsret, dokumentation og god akademisk praksis

Regler og compliance

Hvad er ophavsret?

Litterære og kunstneriske værker er **automatisk** beskyttet af ophavsretten

Et værk skal være **originalt**, **kreativt** og have **værkshøjde** –der er **intet krav om kvalitet**

Enkelte **faktuelle** oplysninger, **data**, **idéer**, **tanker** og **opfindelser** er **ikke beskyttede** af ophavsretten – **kun værker**

Ophavsretten giver **økonomiske rettigheder** til at **udgive**, **offentliggøre**, **eksemplarfremstille** og **modificere** værket -> disse kan **overdrages**

Og den giver **ideelle rettigheder** til at blive **navngivet** og **respekteret**

Varer i 70 år efter ophavsmandens død (for det meste)

Ophavsretten har **undtagelser** som hjælper os som brugere

Et par vigtige ophavsretslige undtagelser

Brugsretten til udgivne værker

Retten til **privat kopiering** (§ 12)

Retten til at **citere værker** (§22)

Brug af **billeder i videnskabelige værker** i sammenhæng med teksten (§23)

Og en masse andre, såsom §16 for **biblioteker** og **den nye § 11b og 11c om TDM, parodiundtagelsen** (§ 24b), § om tilgængelighed for syns og hørehandicappede.

Og vigtigt: ingen **Fair use** i Danmark

Aftaler og licenser

Ophaveren kan **overdrage** retten til at **udgive** / **offentliggøre** et værk og til at **eksemplarfremstille** værket.

Overdragelse sker typisk ved **aftale**

- F.eks. en **forlagsaftale** / aftale om publicering af en artikel eller vilkår i en **ansættelsesaftale**

Et værk kan blive tildelt en **licens** af rettighedshaveren

- En licens giver brugeren **rettigheder** der ligger **udenfor den normale brugsret**
- Hvis et værk **ikke har en licens tilknyttet**, så **kan man ikke bruge det uden at spørge rettighedshaveren**

Et eksempel på en licens: Creative Commons

En **Creative Commons licens** er en **licens**, du kan tildele **dit eget værk**

Du vælger en cc-licens hvis du **gerne vil dele dit værk**, Men stadig vil **beskytte hvordan andre kan bruge det**

En Creative Commons licens **giver giver andre mulighed for at bruge dit værk uden at spørge dig om lov**

Disse licenser **lette at forstå**, og samtidig baseret på et **grundigt og holdbart juridisk grundlag**. Hver CC-licens har en **tilknyttet kode** man kan bruge hvis man deler sit værk online.

CC-licences used in golden and hybrid journals

[Licenses used by gold and hybrid OA journals in DOAJ](#) by [Thomas Shafee](#) is used under a [CC BY 4.0](#)

"Copydan" og vores aftaler på DTU

Copydan **forvalter rettigheder** for en række rettighedshavere ved at **opkræve** og **fordele vederlag** for udnyttelse af ophavsrettigheder i henhold til **aftalelicenser**

Aftaleretten i Danmark gør, at langt de fleste rettigheder administreres af Copydan-organisationerne

Det er **ret smart**, idet man ofte kun skal spørge / forhandle **et sted**, og den enkelte ophavsmand ikke selv bliver spurgt hele tiden

Tekst & Node – kopiaftalen på DTU

Gør det lettere at kopiere materialer til brug i undervisningen på DTU

Man kan kopiere* **maximum af 20 %**, dog højest **50 sider** af et værk pr student pr 6 måneder

Uanset publikationens længde må man altid kopiere eller printe **4 sider** til brug i undervisningen

Man må kun dele på lukkede sites, som **DTU Learn**.

* Kopiering er meget bredt defineret i aftalen, så der er også tale om digital kopiering

VISDA - billedaftalen på DTU

Man kan peppe sine opgaver og præsentationer op med billeder

Så længe billederne **ikke er fra betalingssites**

Så længe ens **publikum** er fra DTU (eller en institution med samme aftale)

Så længe man **ikke redigerer** billederne

Så længe man **kildeangiver** - skriver hvor billederne er fra, f.eks:

Brug af billeder - korrekt

“[Furggelen afterglow](#)” by [Lukas Schlagenhauf](#) is licensed under [CC BY-ND 2.0](#).

Dette er for øvrigt en ideel citation fordi den har

Titel: “[Furggelen afterglow](#)”

Forfatter: “[Lukas Schlagenhauf](#)”—med et link til hans profil-side

Kilde: “[Furggelen afterglow](#)”—med et link til det originale foto på Flickr

Licens: “[CC BY-ND 2.0](#)”—med et link til licensen

Gode råd om billeder fra juristerne

Sørg for at **du har lov** til at bruge et billede **hvis det er uden for DTU**

Kildeangiv altid – også når noget er købt eller åbent

Gem tilladelser du har fået (via kontrakt eller mail eller chat osv)

Brug **kendte sites** -> f.eks. <https://wordpress.org/openverse/> der giver mulighed for at vælge **"I can Use commercially"** og **"Modify or adapt"**

Vær klar til at **fjerne et billede** (eller en tekst)

Hvis en rettighedshaver henvender sig, **så svar med det samme**. Start dialogen

Hvas siger loven og juristerne – den ultrakorte version

Generativ AI og ophavsret

Generativ AI og ophavsret

Kan du **beskytte** et **værk** skabt med hjælp af generativ AI?
Hvornår er **outputtet** et **værk**?

Svaret er i ophavsrets-reglerne:

Hvad er kravene for at **kunst** eller **litteratur** bliver betragtet som et **værk**, og at dermed er **beskyttede** af ophavsretten?

Der skal have været foretaget **kreative valg**

Det der skabes skal være **originalt** (og have værkshøjde)

Hvis dette er tilfældet, så er det der er **skabt automatisk beskyttet af ophavsretten**

Hvad er de relevante kreative valg?

- Prompting
- De **valg man** træffer om at beholde eller fjerne dele af det AI'en har foreslået
- De ændringer **man** laver til det AI'en har foreslået
- Touchup og anden **efterbehandling**
- Videre processing

Hvor **meget kreativitet der er nødvendigt** er uklart indtil der kommer kendelser fra danske og europæiske domstole.

Så svaret er at ***nogen kreativ indsats er nødvendig***, men der **skal nok ikke enormt meget til**, er den juridiske konsensus.

Hvem ejer det man laver med hjælp af genAI?

Tjek værktøjernes Terms of Service (som altid).

Man bør altid **læse vilkårene i de værktøjer man bruger**, for at sikre sig at rettighederne til det man skaber tilfalder en selv (er ens eget værk).

Microsoft **Co-pilot / Dall-E** såvel som **as ChatGPT** og **Midjourney** overdrager alle ophavsretten til sine brugere.

Men andre værktøjer/services er mindre tydelige, f.eks.:

- **Hotpot AI** <https://hotpot.ai/pricing> kræver at man tilkøber retten til at bruge det man skaver kommercielt.
- **Imagine.art** <https://www.imagine.art/dashboard/image/subscription/>
- **Gencraft** <https://gencraft.com/terms> forbyder kommerciel brug med mindre man har et abonement af servicen.

Et eksempel: Section 3(a) of the OpenAI Terms of Service states:

“As between the parties and to the extent permitted by applicable law, you own all Input.

Subject to your compliance with these Terms, OpenAI hereby assigns to you all its right, title and interest in and to Output. This means you can use Content for any purpose, including commercial purposes such as sale or publication, if you comply with these Terms.”

So ChatGPT outright assigns intellectual property rights in outputs to the user, rather than just granting a limited license. This enables more flexibility for users to commercially exploit ChatGPT-generated content.

Hvad så med værker skabe af genAI alene?

Monkey Selfie-sagen

I december 2014 afgjorde U.S. Copyright office at: "Et værk uden **mennekelig, intellektuel skabelse** (human intellectual creation) ikke bør have traditionelle ophavsretslige rettigheder".

Dette er siden stadfæstet Verden over og senest i december 2025.

Hvis et dyr ikke kan have ophavsretten, så kan AI-genererede output heller ikke, er domstolenes konsensus.

Hvad så med disse værker?

- Ville det så sige at alle AI-genererede output er under **offentligt domæne**?
- Kan de **beskyttes** af **andre IP rettigheder**?

Skal jeg bekymre mig om plagiat når jeg bruger genAI?

JA, De **almindelige regler om ulovlige efterligninger** gælder.

Så lad være med at lave prompts som “et billede af en kat der ser ud som om det er malet af Morten Mørup” – dette gælder for **tekster** så vel som **billeder, musik** eller andre **værker**

Og vær opmærksom på **potentiallet for plagiat** hvor **AI værktøjet kan have reproduceret substantiel tekst fra andre kilder**. Tjek de originale kilder for at være sikker på at du ikke plagierer en andens værker.

NEJ, på trods af at **data brugt til at træne LLM'erne** kan være **stjålet/ulovligt**

DTU's jurakontor mener ikke **at det at bruge generative AI værktøjer i sig selv er en krænkelse** af de ophavsretsligt beskyttede værker der kan have været brugt i forbindelse med træningen af sprogmodellen.

Plagiat i God forskningspraksis og ophavsret

Brug af en anden persons værker **uden anerkendelse** er **plagiat**

Brug af en anden persons værker **uden tilladelse** er en **ophavsretskrænkelse**

En note om plagiat

Husk, at **kravene for at noget er plagiat i en videnskabelig sammenhæng** er meget strikte, og som studeterende bør man være ekstra påpasselig når man bruger generativ AI.

Dette inkluderer brug af genAI til at **parafrasere tekster**, skabe tekster baseret på tekst og datamining osv.

DTU's retningslinjer og regler for brug af (generativ) AI

Hvad må man?

EUROPÆISK FØRERSKAB I KRITISKE TEKNOLOGIER

DTU skal bidrage til europæiske førerpositioner inden for kritiske teknologier.

Vi bygger kapacitet ved at:

I forskningen udvikler vi næste generation af kunstig intelligens med fokus på sikkerhed, gennemsigtighed, europæiske værdier og ressourceeffektivitet. Vi forsker i, hvordan kunstig intelligens kan accelerere grøn omstilling og i teknologiens eget klima- og resourceaftryk.

kan accelerere teknologiens eget klima- og resourceaftryk.

yt terræn indgår i forsvarsforberedelse og er åbne for nye muligheder.

omner, der ikke har en smagskraft, og vi indgår i en proces, der ikke fører til enten en ændelse eller samfunds-

FYSISKE FÆNOMENER
på papir bliver suget igennem papirets porer og væsken transport gennem materialer og skal fastslå, hvor åndbar en bygning er.

Foto: DTU

16

Kunstig intelligens er en samfundsændrende teknologi, der både kan accelerere løsninger, og som selv skaber udfordringer. Vi navigerer bevidst i dette dilemma.

I forskningen udvikler vi næste generation af kunstig intelligens med fokus på sikkerhed, gennemsigtighed, europæiske værdier og ressourceeffektivitet. Vi forsker i, hvordan kunstig intelligens kan accelerere grøn omstilling – og i teknologiens eget klima- og resourceaftryk.

Strategi i en foranderlig verden

Teknologisk udvikling – især kunstig intelligens – transformerer fundamentalt måden, vi forsker, lærer og skaber løsninger på.

Kunstig intelligens kan accelerere løsninger på klimakrisen, men er selv enormt ressourcekrævende.

Dette dilemma stiller nye krav til kompetencer og til universitetets rolle.

https://dtu.dk/om-dtu/strategi_aarsrapporter_mv/strategi-2026-2031

DTU's AI “politik”- så meget som vi nu har sådan en...

“DTU **embraces** the use of artificial intelligence (generative AI) and focuses on its potential to enhance learning and well-being. DTU allows the use of generative AI in teaching and for exams with open internet. **DTU sees generative AI as an opportunity to develop the teaching role and methods.**”

- Fra: [AI in education - DTU Inside](#)

P.t. er der et par DTU-grupper der arbejder med at koordinere og rådgive om generative AI på DTU, herunder **AI Governance udvalget**.

Den bedste DTU ressource for undervisere (IMHO) er:

DTU AI Info hub, hvor fremragende folk fra hele DTU samler resourcer og gode råd, desværre lidt ujævnt i fht. forskning lige nu

➞ <https://www.ai.dtu.dk/>

Gode råd som beskrevet i AI Info Hub

Can students use AI in their studies?

The answer is yes, as long as students clearly indicate when and how they are utilizing AI. It's essential to follow the rules for proper citation when using generative AI.

Can student use AI in their exams?

AI is currently allowed in some courses and exams. In these courses, learning objectives are adjusted to accommodate AI usage, and the exam format assumes that students can master critical thinking skills.

Can teachers use AI when designing their teaching materials?

Teachers are encouraged to use AI when designing their teaching materials. Embracing AI provides an opportunity to rethink the role of teaching, combining technical knowledge, pedagogical expertise, and awareness of the latest advancements in the field.

<https://www.ai.dtu.dk/rules/>

Guideline om generativ AI som forfatter

DTU følger **the Vancouver retningslinjerne** om videnskabelige forfatterskaber.

Siden maj 2023 har disse inkluderet en regel om at **AI ikke kan være forfatter**.

“Chatbots (such as ChatGPT) should not be listed as authors because they cannot be responsible for the accuracy, integrity, and originality of the work, and these responsibilities are required for authorship.

Therefore, humans are responsible for any submitted material that included the use of AI-assisted technologies. Authors should carefully review and edit the result because AI can generate authoritative-sounding output that can be incorrect, incomplete, or biased.”

➔ https://icmje.org/news-and-editorials/icmje-recommendations_annotated_jan25.pdf

Hvad med det der ikke er generativt?

AI Act – hvad er det egentlig?

Hvad er AI Forordningen?

EU regler gældende i alle medlemslande, der definerer forbudte AI systemer og højrisko AI systemer med udgangspunkt i, hvordan de **påvirker grundlæggende rettigheder**.

Har en **risikobaseret** tilgang til **AI modeller** og **AI systemer**

Beskytter **sundhed, sikkerhed, demokrati, retsstatsprincippet** mv.

Regulerer **produktsikkerhed**

Fastsætter **forpligtelser** for idriftsættere og udbydere af **AI systemer**

Stiller krav til **ansvarlighed, gennemsigtighed og dokumentation**

Baseret på materiale fra informationsmøde for compliance referencegruppen d. 12. november 2025. Brugt efter aftale

Situationer, hvor DTU potentielt er underlagt EU AI Act

Baseret på materiale fra informationsmøde for compliance referencegruppen d. 12. november 2025. Brugt efter aftale

Risikoklassificering af AI modeller og systemer i AI Act

	AI modeller til almen brug	AI systemer med minimal risiko	AI systemer med begrænset risiko	AI systemer med høj risiko	Forbudte AI systemer med uacceptabel risiko
Eksempler	Underliggende algoritmisk model der kan integreres i forskellige AI systemer, LLMs	Spamfiltre, Stavekontrol, Oversættelser, Tale til tekst.	Chatbots, Deepfakes.	AI til ansættelse, AI til uddannelse, AI til evaluering af læringsresultater, AI i medicinsk udstyr, AI i legetøj, AI i fartøjer, AI i maskiner.	Ansigtsgenkendelse, Skadelig manipulation, Udnyttelse af sårbarheder, Social bedømmelse, Profilering.
Krav i AI Act	Dokumentationskrav, gennemsigtighed, EU ophavsret, træningsdata	Ingen særlige krav	Gennemsigtighedsforpligtelser	Underlagt omfattende krav	Forbudt

Baseret på materiale fra informationsmøde for compliance referencegruppen d. 12. november 2025. Brugt efter aftale

Eksempler i universitetssammenhæng

Højrisiko AI-systemer

- Brug af AI til ansættelser (analysere og filtrere jobansøgning eller evaluere kandidater)
- Brug af AI til adgang/ optagelse/ fordeling på uddannelsesinstitutioner
- Brug af AI til evaluering af læringsresultater

AI-systemer med begrænset risiko

- Brug af generativ AI som Copilot eller ChatGPT i administrationen
- Chatbots til besvarelse af studerendes spørgsmål

AI-systemer med minimal risiko

- Spamfiltre
- Stavekontrol
- Oversættelser

Baseret på materiale fra informationsmøde for compliance referencegruppen d. 12. november 2025. Brugt efter aftale

Tilbage til generativ AI

European Commission ERA genAI guidelines

Made together with genAI
<https://mmmlabel.tech/>

Generative AI is transforming research practices

Opportunities: productivity, multilingual writing, data analysis

Risks: disinformation, bias, misuse, IP & privacy concerns

Generative AI is a powerful tool,
but *not* a researcher

Environmental Responsibility?

AI has a **carbon footprint**

Use efficient prompting & sustainable tools

Evaluate necessity before using AI

Align with sustainable research practices

Goal of the guidelines: Helping you use AI responsibly, transparently, and ethically to strengthen and uphold research integrity & trustworthiness

Living guidelines on the responsible use of generative AI in research | Research and innovation
(https://research-and-innovation.ec.europa.eu/document/2b6cf7e5-36ac-41cb-aab5-0d32050143dc_en)

Key Principles in the EU guidelines

Honesty: **disclose** AI use, **avoid** fabrication/plagiarism

As a part of being honest: **Transparency** – **document** your prompts and sources

Accountability: human oversight, **researchers remain responsible**

Respect: **protect** privacy, IP, environment, society

Reliability: **ensure** quality, reproducibility, **avoid** bias

Take the **limitations of the technology into account**: its environmental impact and its societal effects (bias, diversity, non-discrimination, fairness and prevention of harm).

Living guidelines on the responsible use of generative AI in research | Research and innovation
(https://research-and-innovation.ec.europa.eu/document/2b6cf7e5-36ac-41cb-aab5-0d32050143dc_en)

Responsible Use of GenAI – Researchers

Researchers remain **responsible** for all scientific output

AI is a tool, not an author.

Be **transparent**: disclose AI tools, versions, prompts, outputs

Transparency builds trust - always disclose when AI shaped results.

Protect **privacy & IP**: avoid uploading sensitive/unpublished data

Privacy and intellectual property are critical: don't upload unpublished work.

Respect **laws**: plagiarism, copyright, GDPR compliance

Laws apply to AI outputs just as they do to human work.

Keep **learning**: training, best practices, sustainable use

Encourage students to seek training and stay updated.

Avoid AI in **sensitive tasks**: peer review, proposal evaluation

Sensitive activities (like peer review) must remain human-led to protect integrity.

Living guidelines on the responsible use of generative AI in research | Research and innovation
(https://research-and-innovation.ec.europa.eu/document/2b6cf7e5-36ac-41cb-aab5-0d32050143dc_en)

Understanding AI Limitations

Bias in training data: skewed or discriminatory outputs

AI outputs must always be checked critically.

Prompt bias: overly agreeable or misleading answers

Bias can creep in from the datasets used to train models.

Hallucinations: false or nonsensical information

“Hallucinations” are common - don’t trust AI blindly.

Invented citations: plausible but incorrect references

Citations may look real but be fabricated - verify every reference.

Black-box opacity: unclear reasoning, need for cross-validation

Because AI is a “black box,” reproducibility and validation are essential.

Practical Tips for Researchers (and Students)

Always **cite properly** - including when AI assists

Proper citation is the basis for responsible scientific conduct

Use AI for **support**, not substitution

Treat AI like a research assistant, not a co-author.

Keep a **critical mindset**: verify outputs

Don't underestimate the importance of critical thinking - AI can mislead.

Discuss AI use with **supervisors early**

Transparency with supervisors avoids misunderstandings.

Document **prompts & outputs** for transparency

Documenting prompts/outputs aligns with open science principles.

Choose tools with **privacy safeguards**

Privacy-conscious tools protect sensitive data and research integrity.

Living guidelines on the responsible use of generative AI in research | Research and innovation
(https://research-and-innovation.ec.europa.eu/document/2b6cf7e5-36ac-41cb-aab5-0d32050143dc_en)

Kan man bruge genAI til sine rapporter?

Den generelle vejledning fra Ph.d- kontoret er god at følge

- **Verify** the **accuracy**, **validity**, and **appropriateness** of the content and any citations generated by the AI tool and correct any errors or inconsistencies.
- Provide a **list of sources** used to generate content and citations, including those generated by the AI tool. **Double-check citations** to ensure they are accurate and properly referenced.
- Be conscious of the **potential for plagiarism** where the AI tool may have reproduced substantial text from other sources. Check the original sources to be sure you are not plagiarizing someone else's work.
- **Acknowledge the limitations** of the AI tool in the proposal preparation, including the potential for bias, errors, and gaps in knowledge.

Hvad må jeg lovligt uploade til en generativ AI

- Alt du **selv har skabt** (dine egne værker)
- Alt som er i det **offentlige domæne**
- Alle materialer der har fået en **CC-0 licens** af rettighedshaveren

Ikke ret meget andet, med mindre:

- Du får **tilladelse** fra rettighedshaveren
- Du specifikt er i gang med at lave TDM med henblik på “**videnskabelig forskning**” (fordi der i loven er en TDM undtagelse I §11c)

Men hvad med Open Access artikler osv.?

- Brug *kun* artikler med **CC-BY** licensen, **OG**
- **Citer alle materialerne** for at opfylde attributions-kravet

Og ja, dette **gælder alle værktøjerne**, også Microsoft Co-pilot med DTU login

Is it allowed to upload textbooks or excerpts to ChatGPT or other chatbots?

No, you cannot*

Can I upload textbooks or excerpts of textbooks to a customized Chatbot such as OpenAI's "GPTs", which are not shared with others and are for my own use only?

No, you cannot*

Is it allowed to upload textbooks or excerpts of textbooks to a customized Chatbot such as OpenAI's "GPTs" that are not shared with others and then share the chatbot with others?

No, you cannot*

Is it allowed to upload textbooks or excerpts of textbooks to a generative AI tool for the purpose of generating an audiobook version of the textbook?

No, you cannot*

Do the agreements with Copydan Text & Node cover the use of textbooks in relation to ChatGPT or other generative AI tools?

No, the agreements do not cover the use of textbooks in the context of generative AI tools

Der er en kollektiv licens på vej fra Tekst & Node (Copydan)

Det ville være en rigtig god ting for undervisere og studerende, såfremt det bliver til at betale.

For forskere vil det være vigtigt at sådan en tager højde for vores rettigheder under § 11c

Dette er vejledninger fra RettighedsAlliancen, som er de danske rettighedshaveres interesse- og lobbyorganisation. Selv hvis man mener at de er biased (det er de), så er det vigtigt at forholde sig til hvad rettighedshaverne mener:

<https://rettighedsalliancen.dk/rettighedsalliancen-vejleder-uddannelsesinstitutioner-om-de-juridiske-begraensninger-for-brug-af-chatbots/>

Fra vores kollegaer i Aalto i Finland

Nogle spørgsmål til fremtidens forskere

Nogle spørgsmål til jer som kommende forskere

I ALLEA's (EU's vejledende forum om god forskningspraksis) liste over "**Violations of research integrity**", er **at skjule brug af AI** i forskningsprocessen nævnt, men:

Where is the fine line between a **spellchecker** and a **full text rewrite**?

- [Elsevier's example: spell check, grammar, punctuations, no need to declare](#)

Do you trust **AI summaries** and **AI generated citations**?

- [LLMs are 5 times more likely overgeneralize and misinterpret scientific literature](#)

Do you trust **AI generated code**?

Arbejde med AI er lige som god forskningspraksis

Ærlighed – vær åben og **fortæl** at du bruger AI

Transparens – vis **hvordan** du har brugt AI og **hvad** du har uploadet (**Dokumenter** dine **prompts** og dine **kilder**)

Ansvar – forstå, at **du** har **det fulde ansvar** for alt du laver med AI (dine **output**)

Respekt - for kollegaer, forskningsdeltagere, forskningsobjekter og emner, samfundet, kulturarv og for miljøet.

Respekter og forhold dig til de begrænsninger teknologien har, dens bæredygtighed og sociale udfordringer ("bias, diversity, non-discrimination, fairness and prevention of harm"). Dette inkluderer respekt for privatliv, fortrolighed og intellektuelle rettigheder.

(Kreativitet) – brug dine **egne skabende kræfter**, tanker og idéer. Rewrite, rewrite, rewrite. Og undlade at efterligne andre.

Bio-break

Del 3: Inklusiv introduktion til DTU Findit og ‘other search tools’

Hvilke værktøjer er de rette for dig?

Materialer typer

Ordbøger / thesaurus	• Kan anvendes til at oversætte ord, finde søgeord & synonymer
Opslagsværker (wikipedia)	• Baggrundsviden, overblik og til dels grundigere beskrivelser
Monografier/bøger	• Typisk 'i dybden' analyser og indsigt (sammenstillet litteratur)
Videnskabelige artikler	• Ofte meget specifikt fokus – omhandler nyere forskningsresultater, metoder og test indenfor et emne
Konferencebidrag	• Korte highlights fra forskning, inden det kommer i artikler
Standarder & patenter	• Konkrete specifikationer/guidelines • Patenter skal være "nyt og aldrig set før"
Alt det andet...!	• Websøgninger, sociale medier, offentlige virksomheder, AI værktøjer, almindelige søgemaskiner, produkt, statistisk osv.

Husk kendetegnene ved en videnskabelig artikel?

Abstract

The market penetration of business models for circular economy is limited in most manufacturing sectors due to shortcomings in capabilities of companies to execute circular economy business model innovation. Available approaches are still generic and provide limited help for contextualised solutions within sectorial challenges. This paper introduces sectorial business model patterns to support manufacturing companies to reduce complexity and uncertainty within circular economy business model innovation. Based on a multidimensional scaling analysis of more than 180 cases of companies that implemented circular economy business models, a number of sectorial patterns were consolidated for six selected sectors. The patterns prescribe a combination of business models configuration options and architectures for tackling specific sources of structural waste. Testing with manufacturing companies revealed the potential of the sectorial patterns to support: (1) visualisation of viability and feasibility of circular economy business models, which strengthens motivation and arguments for the implementation of circular economy, which facilitates higher impact for circular economy. In addition, the patterns provide a basis for variations across sectors, a procedure for the forward, which can be expanded to other sectors.

ELECTRONIC BOOK
INDOOR AIR POLLUTION

IN Indoor Air Pollution — 2004, Volume 4, pp. IX, 270 S. (unknown)
BY Ayoko, Godwin A.
EDITED BY Pluschke, P Pluschke, P

This 263-page book entitled 'Indoor Air Pollution' is part F of volume 4 in the series 'The Handbook specifically deals with indoor air pollution. Indoor air pollution has become a major topic in environmental research and health. The book contains 9 individually-authored chapters, all of which are written in English and contain a list of references.

This volume provides a comprehensive review on the major indoor air pollutants including volatile organic compounds, biocides, indoor particles and fibers, combustion products and microorganisms and their metabolites. Other topics discussed include the adsorption and desorption processes, pollutant source dynamics, gas phase reactions and kinetics, the evaluation of sensory impact and irritation potential.

Guidelines are provided for the assessment of indoor pollution and a broad range of recently developed analytical methods are reviewed by internationally-renowned scientists. Specific characteristics of indoor pollution due to the widespread use of open fires for cooking, heating and lighting are analyzed and Chinese strategies to address the growing problem of air pollution in its modern building stock are outlined.

The book is indexed by subject. This book will be used by environmental scientists and environmental chemists

Evaluation of indoor air quality screening strategies: A step-wise approach for IAQ screening

IN *International Journal of Environmental Research and Public Health* — 2016, Volume 13, Issue 12, pp. 1240

BY [Wong, Ling Tim](#)¹; [Mui, Kwok Wai](#)¹; [Tsang, Tsz Wun](#)¹

EDITED BY [Cincinelli, Alessandra](#); [Martellini, Tania](#)

FROM Department of Building Services Engineering¹ [details](#)

Conducting a full indoor air quality (IAQ) assessment in air-conditioned offices requires large-scale material and manpower resources. However, an IAQ index can be adopted as a handy screening tool to identify any premises (with poor IAQ) that need more comprehensive IAQ assessments to prioritize IAQ improvements.

This study proposes a step-wise IAQ screening protocol to facilitate its cost-effective management among building owners and managers. The effectiveness of three IAQ indices, namely θ_1 (with one parameter: CO₂), θ_2 (with two parameters: CO₂ and respirable suspended particulates, RSP) and θ_3 (with three parameters: CO₂, RSP, and total volatile organic compounds, TVOC) are evaluated.

Compared in a pairwise manner with respect to the minimum satisfaction levels as stated in the IAQ Certification Scheme by the Hong Kong Environmental Protection Department, the results show that a screening test with more surrogate IAQ parameters is good at identifying both lower and higher risk groups for unsatisfactory IAQ, and thus offers higher resolution.

Through the sensitivity and specificity for identifying IAQ problems, the effectiveness of alternative IAQ screening methods with different monitoring parameters is also reported.

Nanoelectronics and Heterogeneous with 2D Materials

IN 2019 IEEE Workshop on Microelectronics and Electron Devices (wmed) — 2019

BY Pop, Eric

FROM Stanford Univ¹, Stanford Univ² details

This talk will present recent highlights from our research on two-dimensional (2D) materials including graphene, boron nitride (h-BN), and transition metal dichalcogenides (TMDs). The results span from material growth and fundamental measurements, to simulations, devices and system-oriented applications that take advantage of unusual 2D material properties.

We have grown monolayer 2D semiconductors and uncovered that ZrSe₂ and HfSe₂ have native high relevance [3]. Improved electrical contacts [4] lead to the highest current reported to date, near ballistic limit. These could play a role in 3D heterogeneous integrated energy-efficient computation [6]. In less conventional analog dot product circuits [7], as thermal insulation transistors [9].

The latter could enable control of heat in "thermoelectric" devices, revealing fundamental limits and some unusual properties.

Bioactive peptides from food fermentation: A comprehensive review of their sources, bioactivities, applications, and future development

IN *Comprehensive Reviews in Food Science and Food Safety* — 2020, Volume 19, Issue 6, pp. 3825–85

BY [Chai, Kong Fei](#)¹; [Voo, Amanda Ying Hui](#)¹; [Chen, Wei Ning](#)¹

FROM School of Chemical and Biomedical Engineering¹ [details](#)

Bioactive peptides (BPs) are specific protein fragments that exert various beneficial effects on human bodies and ultimately influence health, depending on their structural properties, amino acid composition and sequences. By offering promising solutions to solve diverse issues, the production, characterization, and applications of food-derived BPs have drawn great interest in the current literature and are of particular interest to the food and pharmaceutical industries.

The microbial fermentation of protein from various sources is undoubtedly a novel way to produce BPs with numerous beneficial health effects. Apart from its lower cost as compared to enzymes, the BPs produced from microbial fermentation can be purified without further hydrolysis. Despite these features, current literature shows dearth of information on the

How to create a feed

Feeds on tables of contents

With DTU Findit, you can subscribe to tables of contents from the journals.

To create a feed:

1. Find your preferred journal in DTU Findit, e.g. "Nature".
2. Click it in the search result page
3. Find the Feeds icon on the top of the page; it looks like this: 
4. You will then receive an e-mail whenever new content is published in this journal.

Save and subscribe to your search

In DTU Findit, you can save searches and set up alerts on your own keywords or authors.

First, perform your search in DTU Findit and then select "Save as feed", located above the search box.

Now you will receive an e-mail when new content matching your search is published.

Find and change your feeds via Feeds under "My content" placed to the right of your search results.

Instructional content for a learner who

In this 6-hour course, you will explore OpenAI's groundbreaking AI models, including GPT and DALL-E. Through hands-on projects and real-world scenarios, you will learn to implement these tools for text generation, image creation, and much more.

What I will be able to do after this course

- Understand the technologies behind OpenAI's tools and models
- Create and implement AI models using OpenAI's GPT and DALL-E
- Apply prompt engineering, fine-tuning, and tokenization to enhance AI outputs
- Build practical AI applications such as research assistants, translators, and personal trainers
- Explore the ethical challenges and limitations of generative AI and image models

Course Instructor(s)

Abstract

Recently, fabricated two dimensional (2D) phosphorene crystal structures have demonstrated great potential in applications of electronics. Mechanical strain was demonstrated to be able to significantly modify the electronic properties of phosphorene and few-layer black phosphorus. In this work, we employed first principles density functional theory calculations to explore the mechanical properties of phosphorene, including ideal tensile strength and critical strain. It was found that a monolayer phosphorene can sustain tensile strain up to 21CA and 30% in the zigzag and armchair directions, respectively. This enormous strain limit of phosphorene results from its unique puckered crystal structure. We found that the tensile strain applied in the armchair direction stretches the pucker of phosphorene, rather than significantly extending the P-P bond lengths. The compromised dihedral angles dramatically reduce the required strain energy. Compared to other 2D materials,

Abstract

Objectives: Health information is an important resource for patients to understand and engage in the management of their health conditions. We discuss the role of health literacy (HL) in improving patient participation and propose future research in this field. Methods: Literature searches were conducted to review existing definitions and measures of HL and identify empirical findings of its impact on patient health/illness-related behaviours. We searched MEDLINE using 'health literacy' as a keyword and retrieved 371 articles published in English between 1985 and 2006. We also hand-searched publications of leading researchers and related institutes and followed the reference lists of relevant articles. Results: The World Health Organization has defined HL as 'the cognitive and social skills which determine the motivation and ability of individuals to gain access to, understand, and use information in ways which promote and maintain good health.' Based on this definition, three levels of HL have been described: functional, communicative and critical. Studies of HL have increased dramatically over the past few years, but there is a gap between the conceptual definition of HL and its application. Thus, empirical evidence of its impact on patient health/illness-related behaviours is still limited. Conclusions: The prevalence and consequence of inadequate HL as fully defined have not been determined. Further research is needed to develop measures of HL beyond the functional level and that consider the interaction of the individual patient HL with the health and social contexts in which the patient lives. © 2008 The Authors.

A Conversation with ChatGPT: Philosophy, Critical Thinking, and Higher Education
Ikeoluwapo Baruwa¹ 2024

View PDF Add to dashboard Cite

The growing concern surrounding technology in education, particularly in **higher education**, serves as the impetus for this paper. After a period of avoiding ChatGPT due to fears that it might diminish my human form, I felt compelled to engage in a conversation with the tool, in light of the conference hosted by the Philosophers of Education Association of Nigeria (PEAN), themed "Philosophy, Artificial Intelligence, and Digital Education." Through my exploration, I learned that "GPT" stands for generative pre-training transformer, a framework in language processing and machine learning designed to produce human-like responses to various prompts. Recognizing the reality of coexisting with artificial intelligence (AI) and acknowledging that not all emerging technologies merit the attention of philosophers, the rise of ChatGPT has undeniably become a pressing issue in **higher education**, particularly for faculty and students alike. In my discussions with ChatGPT-4, I engage with the role of AI in **higher education**, focusing on questions relevant to philosophy, **critical thinking**, and academic practices. By reflecting on the prompts from ChatGPT and the insights of educational theorists, I conclude that **critical thinking** and reasoning are intrinsic human qualities that set us apart from AI. Therefore, educators need to embrace their role in guiding student learning and fostering the virtues and skills necessary for navigating an increasingly AI-driven world.

Abstract

Background

Animal-assisted interventions and robotic animal interventions are becoming increasingly popular to support the care of people with dementia and may have the potential to improve a range of psychosocial outcomes. This review aims to identify, describe, and compare animal-assisted and robotic animal interventions delivered to people with dementia, their characteristics, effectiveness, and the proposed mechanisms underlying any potential impact.

the role of academic libraries in reducing information overload amongst faculty

The Role of Academic Libraries in Reducing Information Overload Among Faculty

Information overload is a significant challenge faced by faculty members in academic settings. With the explosion of digital content and scholarly resources, academic libraries are strategically positioned to alleviate this burden through various services and tools that facilitate information management. This paper discusses the ways in which academic libraries contribute to mitigating information overload among faculty, focusing on technological, educational, and support services.

Technological Integration

Academic libraries have leveraged technology to enhance information curation and retrieval. The adoption of Web 2.0 tools, for instance, allows libraries to aggregate content from multiple sources, thus enabling users to access pertinent information more efficiently. Mahmood and Richardson illustrate that many academic libraries utilize RSS aggregators to compile library announcements and relevant articles, fostering a streamlined approach to information consumption (Mahmood & Richardson, 2011). This technology facilitates a focused information landscape, allowing faculty to navigate easily through substantial data flows and pinpoint resources pertinent to their work.

Moreover, the utilization of big data analytics in libraries plays a crucial role in tailoring information retrieval systems to user needs. As noted by Rahman et al., big data technologies enhance user experience by offering personalized recommendations and optimizing search processes (Rahman et al., 2024). Such systems effectively reduce the cognitive load on faculty by filtering out irrelevant information and directing them towards high-quality resources tailored to their specific research interests.

Educational Initiatives

In addition to technological enhancements, academic libraries are pivotal in providing educational support aimed at increasing data literacy among faculty. Liu's findings demonstrate a direct correlation between data literacy education and reduced information anxiety, pointing out that competent handling of data significantly diminishes cognitive overload among users (Liu, 2025). Through focused workshops and training sessions, academic libraries equip faculty with essential skills to interpret and manage data effectively.

Such initiatives are increasingly vital as academia moves towards data-driven research and digital scholarship. As highlighted by Weller and Monroe-Gulick, understanding diverse data practices across different academic disciplines is essential for providing relevant support and guidance in information management (Weller & Monroe-Gulick, 2014). This tailored educational approach not only empowers faculty to utilize information more judiciously but also fosters a culture of informed decision-making in the research setting.

Support Services and Information Resources

The role of academic libraries extends beyond access to information; they also provide critical support services that assist faculty in navigating the complex landscape of academic resources. For example, dedicated librarian support helps faculty locate niche information that aligns with their research needs. Gabbay and Shoham underscore that while faculty perceive libraries as fulfilling their technical needs, they often expect additional assistance in information location and selection (Gabbay & Shoham, 2017). By improving these services, libraries can further alleviate burdens associated with information overload.

Furthermore, the evolving landscape of Research 2.0 demands that libraries actively engage with faculty through customized research services. Koltay emphasizes that academic libraries must adapt their offerings to include targeted services that address the specific information needs of faculty in

the role of academic libraries in reducing information overload amongst faculty

The Role of Academic Libraries in Reducing Information Overload Among Faculty

Information overload is a pervasive challenge faced by academic faculty, compounded by the rapid expansion of digital resources and scholarly communication platforms. Academic libraries play a critical role in mitigating this issue by offering tailored information services, promoting information literacy, and fostering faculty-librarian collaborations.

Tailored Information Services

Academic libraries have historically served as bastions of information access. The transition to digital resources has significantly transformed how faculty engage with libraries, necessitating the development of specialized services that cater to their unique research and teaching needs. Niu et al. (Niu et al. (2010)) highlight that academic researchers often exhibit consistent information-seeking behaviors influenced by their institutional library services. This consistency emphasizes the need for libraries to adapt their offerings to include diverse digital resources and personalized assistance tailored to the faculty's specific disciplines.

Moreover, the findings by Ducas and Michaud-Ostryk (Ducas & Michaud-Ostryk, 2003) support the premise that effective interaction between librarians and faculty enhances research productivity. Through proactive engagement, librarians can identify faculty needs and offer customized support, thus alleviating the stress associated with information overload. This collaborative dynamic not only improves the efficiency of information retrieval but also fosters a more sustainable research environment among faculty (Ducas & Michaud-Ostryk, 2003).

Promoting Information Literacy

Another essential function of academic libraries is the promotion of information literacy. Leckie and Fullerton (Leckie & Fullerton (1999)) discuss the significance of incorporating information literacy into the academic curriculum, stressing the role of librarians in educating faculty and students about effective information-seeking strategies. By conducting workshops and providing resources designed to enhance faculty members' information literacy skills, libraries equip them with the tools necessary to navigate the deluge of available scholarly content.

Additionally, the study by Gabbay and Shoham (Gabbay & Shoham (2017)) suggests that while librarians perceive their contributions to faculty teaching as valuable, there remains a gap in perceived utility concerning research support. Libraries can bridge this gap by developing comprehensive information programs that focus not just on technical skills but also on critical analysis and application of information, helping faculty manage the complexities of information landscapes.

Faculty-Librarian Collaboration

Collaboration between faculty and librarians is critical in addressing information overload. The role of the liaison librarian, which emphasizes partnerships, is particularly important (Rodwell & Fairbairn, 2008). These librarians act as intermediaries who understand both the scholarly needs and the resources available through the library. Campbell (Campbell (2017)) highlights that understanding faculty information needs is fundamental to innovation; thus, designing services and systems that cater specifically to faculty can help mitigate the problems associated with information overload.

Additionally, surveys conducted by Walter (Walter (2008)) indicate that academic librarians increasingly identify with a teaching role, which is instrumental in fostering these collaborations. Regular interactions and tailored support from librarians can lead to more manageable information utilization practices among faculty, thereby reducing their cognitive load.

→ nimby

NIMBY, an acronym for "Not In My Backyard," is a term used to describe the phenomenon where residents oppose local developments perceived to have negative impacts on their communities, despite acknowledging the overall benefits of those developments. This resistance is notably prevalent in the context of renewable energy projects, such as [wind farms](#).

Public opposition to wind projects often stems from concerns related to environmental, aesthetic, and health impacts. Studies indicate that while residents may generally support renewable energy initiatives, they frequently harbor objections when such projects are proposed in close proximity to their homes. Gorroño-Albizu discusses how local ownership models in Denmark's transition to a renewable energy system can alleviate some NIMBY pressures by aligning local economic interests with renewable energy goals, illustrating that community involvement can lead to greater acceptance of such projects ([Gorroño-Albizu, 2020](#)). Additionally, Tavner et al. provide insights into variations in acceptance rates for wind turbines across different locales, emphasizing that local community impacts play a significant role in shaping public perceptions and acceptance of [wind projects](#) ([Tavner et al., 2012](#)).

Moreover, the psychological dimension of NIMBYism is an important aspect to consider. Research by Cook and Lawell highlights how perceived risks associated with wind turbine installations, including concerns about aesthetics and noise, significantly influence public opinion ([Cook & Lawell, 2020](#)). This perception may be compounded by feelings of distrust toward developers or governmental entities managing these projects. Studies addressing policy frameworks surrounding [wind energy development](#) indicate that such distrust can impact public support ([Cook & Lawell, 2020](#)). Additionally, Berg et al. emphasize the role of long-term commitments to local renewable energy policies, noting that stability in these policies tends to foster greater public support ([Berg et al., 2020](#)).

To mitigate NIMBY effects, effective community engagement is crucial. Disseminating information about the environmental benefits and long-term advantages of renewable energy is instrumental. Gao et al. suggest that learning from other countries' experiences with public attitudes towards renewable energy development is vital for crafting policies that instill confidence among local residents ([Gao et al., 2019](#)).

In conclusion, understanding and addressing the complexities of NIMBY attitudes towards [wind farm development](#) is essential for fostering public acceptance. Effective communication, collaboration with local stakeholders, and incorporating local ownership models are strategies that may promote a more favorable outlook on renewable energy projects within communities.

Beyond the data management plan: Expanding roles for librarians in data science and open science

L. Federer, Jian Qin • Published 1 January 2019 • Engineering • Proceedings of the Association for Information Science and Technology

Support for research data management (RDM) has become a popular focus for library services, and many training opportunities in RDM exist for librarians. However, fewer opportunities exist for librarians to develop the more advanced skills and expertise necessary to support data science and open science. To better understand how to develop a library workforce prepared to develop services in the emerging areas of data science and open science, the National Library of Medicine convened a workshop... Del 4: Vurdering og kildekritik

Korte pointer og fif

Kildekritik og vurdering bør altid være en del af jeres proces

- Indhold
- Relevans
- **Afsender**: hvem er forfatter, hvem er ophav, er der et ophav?
- Hvor er **materialet fra?**
- **Tidspunkt**: Hvornår er materialet fra, aktualiteten ?
- **Målgruppen**
- Hvem er **materialet skrevet til?**
- Hvad er **motivationen?**
- **Niveau**: Herunder også faglige niveau?
- Matcher **litteraturen jeres projekt?**

Et par fif til at vurdere

Den danske ordbog:

”**kritisk undersøgelse** af (historiske)
informationskilders **sandhedsværdi**”

Wikipedia:

”Kildekritik er en videnskabelig metode, der vægter
kilders troværdighed.[1] Kildekritikkens formål er at
sikre, at historikere og andre opnår **så pålidelig viden**
om fortiden **som muligt**.[2] Enten i forhold til den
begivenhed eller til det fænomen forskeren ønsker
belyst.”

<https://ordnet.dk/ddo/ordbog?query=kildekritik>
<https://da.wikipedia.org/wiki/Kildekritik>

Colourbox
Research, word in Magnifying glass, network
background by [Nonnakrit](#)

Troværdighed

Hvem er forfatteren?

- Uddannelse
- Tilhørsforhold
- Position
- Kontaktoplysninger
- Er det inden for eget forskningsfelt, forfatteren udtaler sig?

Hvilken kildetype

- Primær/sekundær
- Fagfællebedømt

Hvor er kilden publiceret?

- Anerkendt forlag?
- Hvis internetkilde, hvem står bag?
- Hvis tidsskrift, er det anerkendt/lødigt?

Obs!

Objektivitet

Hvad er hensigten med kilden?

- Vil forfatteren overbevise eller informere?
- Er informationen omfattende, saglig og bliver alle sider af sagen berørt?
- Er informationen ensidig?
- Er den i konflikt med andre tidligere anerkendte kilder?
- Er den videnskabelig kontrollerbar og fagfællebedømt?

Liste (lettere revideret) snuppet fra denne hjemmeside:
<https://kub.ku.dk/biblioteker/frederiksberg/vejledninger/kildekritik/>

Nøjagtighed

Er kilden opdateret omfattende, detaljeret og præcis?

- Hvornår kilden blev publiceret - og revideret (særligt hvis det er bøger eller websites)?
- Er argumentationen saglig og konsistent, detaljeret og nøjagtig?
- Er der kildehenvisninger, som viser, at forfatteren har forsket i emnet?
- Kan informationen bekræftes i andre kilder?

Relevans

Er kilden relevant i forhold til dit informationsbehov og din opgave?

- Hvilket emneområde dækker kilden? (check fx titel og abstract, hvis videnskabelig publikation)
- Hvilken kildetype? (fx videnskabelig publikation eller en nyhedsartikel)
- Er det fagfolk eller ikke-fagfolk, der er ophav til kilden?
- For hvem er kilden skrevet?
- Hvorfor er den blevet publiceret?

Liste (lettere revideret) snuppet fra denne hjemmeside:

<https://kub.ku.dk/biblioteker/frederiksberg/vejledninger/kildekritik/>

Top keywords
relationship between metrics and mechanisms in the science of science, emphasizing the need to uncover the drive scientific activity. It classifies existing theories into categories such as hot and cold science, fast and slow science, suggesting that a deeper understanding of these mechanisms is essential for the effective development and application

could do, and how to make science work? If we want to know the answers to these questions, we need to be able to go beyond metrics that are easily collectible and quantifiable. In this perspective piece, we link metrics to emerging metrics of science not only offer complementaries to existing ones, but also shed light on the hidden. Based on fundamental properties of science, we classify existing theories and findings into: hot and cold science, fast and slow science reflecting productivity of scientists and teams, soft and hard science revealing

Man kan altså bruge et værktøj som altmetrics til at se om noget er værd at bruge tid på...

Det er ikke helt 100% videnskabeligt kun at bruge, men ret smart

<https://app.dimensions.ai/details/publication/pub.1147544301>

Dokumentation og transparens

Referencer

... Kildeangivelser, referencer, ..

Korrekt kildeangivelser viser ...

Gode overvejelser omkring brug af kilder

At du ikke plagierer (planker andres som dit eget)

Holder styr på anvendt litteratur og kilder

Sluttelig, gør identifikation og verifikation mulig (transparens)

Fra 'Stopplagiat.nu' skrives følgende:

- Husk altid at sætte citater i citationstegn og angiv kilden til citatet.
- Så snart du bruger noget andre har skrevet eller lavet, skal du altid lave en kildehenvisning.
Kildehenvisningen skal være så præcis, at din læser entydigt kan identificere kilden. Undersøg om der findes et regelsæt for kildehenvisninger på din uddannelse eller spørg din vejleder, hvad der kræves.

... fra <http://stopplagiat.nu/index.php/hvad-er-plagiering/undga-plagiering/>

I Ophavsretslovens §22 kaldes det ”i overensstemmelse med god skik og i det omfang, som betinges af formålet.”

...skal **begrænses** til det absolut nødvendige

...må kun være en **mindre del af det værk, der citeres fra**

...skal have **et klart formål** i dit eget værk

...må kun være en **mindre del af dit eget værk**

...skal være **tydeligt markeret** med start og slut

...skal have en klar **kildeangivelse**

Correct citing and referencing

Basic information could be :

- Author(s), year, *title*, journal title/source, volume, issue, page(s) = **ARTICLES**
- Author(s), year, *title*, Conference title, place of conference, page(s) = **Conferences**
- Author(s), year,, *book title*, - subtitle, page(s), publisher, edition = **Books**
- Author(s), year, *chapter title*, In: "Author/editor, *book title*, used pages, i.e. publisher, edition = **Book chapters**

A bibliography / Reference list has to be consistent

Referencing when using generative AI

- artificial intelligence in research and assignments

DTU students and employees who use Generative AI systems (e.g. ChatGPT or BingChat) must make sure to document and acknowledge their use of AI – just like using any other tool.

If you use Generative AI, it is your own responsibility to document your use and make it clear where your knowledge stems from, just as it is your own responsibility to adhere to the academic standards of honesty, transparency and accountability as outlined in [DTU's code of honour](#) and [Principles for good scientific conduct](#) (DTU Inside/DTU login), in particular The Vancouver Guidelines.

If you use Generative AI to find, rephrase or generate answers, knowledge, solutions or texts, make sure that you:

- **Acknowledge** your use of Generative AI
- Save the AI result (including the date, your search prompt, the result and the AI

Eksempelvis præsenterer APA style citater ...

<https://apastyle.apa.org/blog/how-to-cite-chatgpt>

Example:

When prompted with “Is the left brain right brain divide real or a metaphor?” the ChatGPT-generated text indicated that although the two brain hemispheres are somewhat specialized, “the notation that people can be characterized as ‘left-brained’ or ‘right-brained’ is considered to be an oversimplification and a popular myth” (OpenAI, 2023).

Reference

OpenAI. (2023). *ChatGPT* (Mar 14 version) [Large language model]. <https://chat.openai.com/chat>

Alternativt kan man vedhæfte hele ‘AI dialogen’ – inkl. prompt som et bilag til ens opgave, og så kan man henvise til det som I kan se i eksemplet nedenfor

Example:

When given a follow-up prompt of “What is a more accurate representation?” the ChatGPT-generated text indicated that “different brain regions work together to support various cognitive processes” and “the functional specialization of different regions can change in response to experience and environmental factors” (OpenAI, 2023; see Appendix A for the full transcript).

Reference

OpenAI. (2023). *ChatGPT* (Mar 14 version) [Large language model]. <https://chat.openai.com/chat>

Fordi **ChatGPT / AI genererede svar ikke kan genskabes 1 : 1** af andre, så skal man omtale den ‘prompt’ som man anvendte i sin tekst – måske via beskrivelse fra metode- eller introduktionsafsnittet

Reference Management saves you time

www.mendeley.com

The screenshot shows the Mendeley website homepage. At the top, there is a navigation bar with the Mendeley logo on the left and links for Solutions, Support, Sign In, Create account, and a Download button on the right. The main content area has a dark blue background with a starry pattern. It features the text "I  DISCOVERY" in large white letters. Below this, a tagline reads "Mendeley brings your research to life, so you can make an impact on tomorrow". Further down, it states "Search over 100 million cross-publisher articles and counting". A search bar with the placeholder text "Search for articles" and a blue Search button is provided. Below the search bar, it lists "Popular searches: [COVID-19](#) [Bioenergy](#) [Obesity](#)". At the bottom, there is a red button that says "Create a free account".

Next step is to install downloads & add-ins

The screenshot shows the Mendeley website with several elements highlighted by colored boxes:

- Sign In** and **Create account** buttons in the top right corner are highlighted with a yellow box.
- Download** button is also in the top right corner.
- Mendeley Reference Manager** and **Mendeley Cite** buttons in the main navigation bar are highlighted with a yellow box.
- Mendeley Desktop** and **Web Importer** buttons in the main navigation bar are highlighted with a yellow box.
- Help Guides** button in the main navigation bar is highlighted with a green box.

The main content area features the headline "Stay on top of your research" and a sub-headline "With Mendeley Desktop, you can easily organize and search your personal library, annotate documents and cite as you write." Below this is a red "Download now" button.

At the bottom, there is a banner with the text "New Mendeley Reference Manager is now available" and a "Get started" button. To the right of the banner is a link to <https://www.mendeley.com/guides>.

Mendeley og Overleaf

Hvis nogen af jer kender og bruger Overleaf/LaTeX

The screenshot displays the Overleaf web interface. At the top, there's a dark navigation bar with the Overleaf logo and links for Features & Benefits, Templates, Plans & Pricing, and Help. Below this is a blue banner with a link to use Overleaf in Danish. The main content area is divided into a left sidebar and a central workspace. The sidebar has a 'New Project' button and a list of project templates including Blank Project, Example Project, Upload Project, Import from GitHub, Institution Template, Technical Writing, Templates, Academic Paper, Book, Formal Letter, Homework, Poster, Presentation, Project / Lab Report, Résumé / CV, Thesis, and a View All option. The central workspace shows a search bar and a table of existing projects. The table has columns for Title, Owner, Last Modified, and Actions. Two projects are listed: 'Introduktion til Overleaf & Latex' and 'Referencehåndtering - del 1', both owned by 'You' and created recently. An account dropdown menu is open in the top right, showing the user's email (jeek@dtu.dk) and options for Account Settings, Subscription, and Log Out. At the bottom, a 'Reference Managers' section highlights integrations with Mendeley and Zotero, each with an 'Unlink' button.

Reference Management & Mendeley

Announcements ▾

Welcome to this short Introductory Module ▾ ×

Jeannette Ekstrøm posted on 21 April, 2021 11:27 AM • Edited

It is with great pleasure that DTU Library presents this short course - the purpose is to provide an easy entry to reference management and what to consider, but specifically, the focus is on 'how to get started with Mendeley' and what kind of support you can expect from DTU Library.

There are no quizzes, but 16 small chapters with links, videos, tips, and pointers on how to approach reference management at DTU.

The target group is 'beginners'. If you have more advanced questions you can contact DTU Library or direct mails to either Pernille & Jeannette, from DTU Library - both are super users and can help you with solutions or suggestions to take further.

Kind regards,

Pernille Seier (pesei@dtu.dk) and Jeannette Ekstrøm (jeek@dtu.dk)
